

BasicRSA-T100

🔑 Trojan description

- 🔑 The Trojan leaks the private secret key by replacing the cypher text when the input text plain is 32'h44444444

🔑 Trojan taxonomy

- 🔑 Insertion phase: Design
- 🔑 Abstraction level: Register-transfer level
- 🔑 Activation mechanism: Externally user input
- 🔑 Effects: Leak Information
- 🔑 Location: Processor
- 🔑 Physical characteristics: Functional

BasicRSA-T100

```
if indata = x"44444444" then
    -- Trojan leaks the private key exponent through the cypher output,
    -- at the Transmitter end
    cypher <= inExp;
else
    -- set output value
    cypher <= tempout;
end if;
```
